Research Topics

**Neurological Disorders** [1]
Scientists at the Hebrew University are making similar advances in diseases as diverse as schizophrenia, depression, and Alzheimer's, and are starting to unravel the mechanisms underlying these illnesses.
Read More [1]

**Consciousness and Cognition** [2]
Researchers at ELSC use advanced EEG and fMRI brain mapping tools to understand what happens in the brain when we become aware of something.
Read More [2]

**Movement Planning and Control** [3]
Scientists at the "Movement Planning and Control" laboratories focus on basic questions such as: How is visual information translated for use by the motor system? How do motor neurons learn new patterns of movement? How and where are learned movements stored in motor memory? A special avenue of research is the development of Brain Machine Interfaces, the control of artificial, robotic limbs through a brain interface.
Read More [3]

**Sensation and Perception** [4]
The Sensation & Perception research labs at the Hebrew University focus on how our brain generates a representation of the world around us, combining incoming perceptual information with memory to enable us to act.
Read More [4]

**Computational Neuroscience** [5]
The field of computational neuroscience combines theoretical physics, advanced mathematics and state-of-the art computer technology to create powerful models of working neural networks,
