A postdoctoral position in the field of human brain imaging is available in the lab of Dr. Aviv Mezer. The Mezer lab is developing state-of-the-art approaches for quantitative MRI and biophysical modeling, to characterize underlying neuronal tissue in normative brains and those with pathologies. The successful candidate is expected to join a project focusing on the development of new MRI measurement techniques for human brain imaging.

Requirements:
Candidates must hold a PhD degree in Neurobiology or related disciplines. The candidates must be familiar with MR-physics. Familiarity with biophysics, computer science, engineering or other related fields is an advantage.

Further details:
Possible start of employment: flexible
