A postdoctoral position is available in the field of neural and circuit plasticity under the supervision of Prof. Adi Mizrahi. The Mizrahi lab is using state of the art imaging, electrophysiological and behavioral tools to study neural correlates of perceptual learning in the auditory cortex of mice. The successful candidate is expected to join a project on cortical plasticity of local circuits primarily using In vivo two-photon calcium imaging in behaving mice.

Requirements:
Candidates must hold a PhD degree in Neurobiology or related disciplines and should have interests in imaging, electrophysiology or related methods (experience is an advantage). Candidates should be proficient in English.

Further details:
Possible start of employment: July 2017
