POSTDOC OPPORTUNITY in

Whole-cell slice electrophysiology

CITRI lab

A postdoctoral position is available in the field of Neurophysiology under the supervision of Dr. Ami Citri. The Citri lab is using state of the art electrophysiological, behavioral and viral tracing and perturbation tools to study the function of the claustrum. The successful candidate is expected to join a project studying the function of the claustrum in attention, applying optogenetics in the context of whole-cell slice physiology to study the neuromodulation of the claustrum and rules governing its communication with cortical structures.

Requirements:

Candidates must hold a PhD degree in Neurobiology or related disciplines and should have published experience in neurophysiology.

Further details:

Possible start of employment: Immediate (position is open until filled).
